

I don't care if my computer gets hacked. There's nothing on it...

A hacked computer can be used to...

- Send spam and phishing emails
- Infect or overload other systems
- Harvest and sell email addresses and passwords
- Illegally distribute music, movies and software
- Distribute child pornography
- Become a malware download site
- Steal passwords and hack into other systems
- Steal information from other systems

...without you even knowing it!

Protect Your Computer:

- Don't click on unknown links or attachments
- Don't download un-trusted files or programs
- Run current anti-virus and anti-spyware
- Install updates when they are available
